Below is our official comment on the guidebook.

We have concerns over the language found in section 4, subsection 2 of the draft guidebook. It mentions the definition of a “qualified person” and then clarifies what an install includes. We just want to confirm and clarify that install will not apply to any physical construction of the array. Specifically, this install language would not apply to any sort of unloading of panels, setting of footings for panels, or erection of the panels. We would like for the “Install” language to remain consistent with the legislation’s intent that “install” only refer to connecting the completed solar structure to the electrical grid.
